Field	Details
Use Case ID	UC-01
Use Case Name	Record Expense
Primary Actor	Group Traveler
System	Group Travel Expense Simplification Engine

1. Preconditions

- Group Traveler is authenticated.
- A trip/group exists.
- Expense details are available.

2. Main Success Scenario

1. The Group Traveler selects the option to record a new expense.

2. The system requests the expense amount, currency, payer, and participating travelers.
3. The Group Traveler enters the required expense details.
4. The system validates the entered details.
5. The system records the expense and associates it with the selected travelers.
6. The system confirms that the expense has been successfully recorded.

3. Postconditions

- Expense is successfully stored.
- Group expense/balance information is updated.

4. Alternate Flow

1. The Group Traveler enters incomplete or invalid expense details.
2. The system detects the missing or invalid information.
3. The system displays an error message asking the Group Traveler to correct the details.
4. The Group Traveler corrects the information and submits the expense again.
5. The system validates the corrected details and records the expense successfully.
